ISCLETEC®

NATURAL EVOLUTION
WITH MAXIMUM
PERFORMANCE

A family firm with more than 30 years' experience in the industry, over the years it has gradually evolved and, thanks to its hard work, investment and team of workers, has today become one of the most important producers of wooden windows and doors in Spain.

Isclotec takes care of the whole production process right from the start, studying the client's needs, the design, choice of wood, manufacture and staining, up to the final assembly on site. Also working together with architectural and engineering studies in order to get the best results from the initial stages of the project. Isclotec has an extensive collection of windows made from laminated wood and mixed materials (wood and aluminium), with benchmark formats throughout Europe, offering the utmost guarantee in energy efficiency and savings, meeting the most demanding needs of countries with extreme climates or countries with a wide fluctuations between summer and winter temperatures, as in Spain.

The finish is achieved by applying ecological, state of the art water-based varnishes that allow the wood to breathe naturally. These varnishes are odourless and easy to maintain. They are highly weather-resistant and have protection against ultraviolet light, avoiding the cracking of synthetic varnishes. Isclotec windows use a wide range of colours from the RAL chart, making it easy to combine tones to create the most comfortable ambiances and meeting the requirements of the most demanding decor.

All Isclotec products have been tested in certified, notified laboratories endorsed by ENAC accreditation, complying with all EU quality requirements and its commitment to the environment.
